

Low-Level Laser Therapy (LLLT) In the Privacy of Your Own Home

LOW-LEVEL LASER LIGHT THERAPY WITH iGROW

The new iGrow take-home low level laser light helmet is a great option for patients who travel, live far from our office, or would like to enjoy the convenience of at-home use, while still achieving a high quality laser light result.

After the impressive results we have seen in the last two years with the Revage 670 Laser in our office, the FHRPS is now offering an at-home version of the low-level laser therapy, called iGrow LLLT Hair Rejuvenation System.

The Revage 670 Laser has been the “gold standard” in laser therapy with studies that have shown it significantly slows down or stops the progression of hair loss in an impressive 85% of patients, while almost 40% of patients show an increase in hair density, within 16 weeks, due to the thickening of miniaturized hairs.

The new iGrow take-home device offers the same technology with 51 tightly placed laser/LED diodes that provide a direct source of laser light, in a new portable helmet design that goes over the scalp for coverage.

With a non-invasive, convenient, and painless treatment program, the iGrow helmet is ideal for patients who would still like to achieve quality results, but are unable to schedule in-office treatments due to location or lack of time.

The FHRPS is excited to offer this alternative option in LLLT Therapy with the new iGrow machine. Contact a Patient Advisor at (305) 666 – 1774 or info@fhrps.com for more information about the iGrow helmet and/or Revage 670 LLLT treatments.

THE WORLD'S FIRST
HANDS FREE LASER HAIR
REJUVENATION SYSTEM

igrow[™]
Hair Rejuvenation System

Available only through physicians experienced in laser light therapy, it is completely painless and safe.

Along with the laser therapy, patients are encouraged to follow medical and nutritional guidelines for enhancing hair growth. Please ask our front office for a list of hair care products we recommend.
