

Scalp Micropigmentation Process

This virtually painless procedure involves the use of highly specialized equipment and unique techniques to carefully and expertly inject all-natural, color-tailored pigments into the scalp creating a completely natural look of the patient's hairline.

A typical procedure involves an initial consultation and two pigmentation sessions to achieve the desired results.

1. Initial Consultation

In order to gain an understanding of the results you want to achieve from your treatment, the experts at the Foundation for Hair Restoration and the Women's Center for Hair Loss will meet with you, guide you through the process and help you decide which approach is best for you. We will create a plan of action and go over each step that needs to be taken to reach your goal and get the results you desire.

2. First Pigmentation Session

During this first session, our experts lay the foundation of your new look by matching the surrounding hair's color and density. Every detail –color variance, space filling, follicle thickness and more– is taken into account to achieve the best results.

3. Second Pigmentation Session

The second session is when a thicker and denser appearance is created with more pigmentation delivered to the scalp. This session usually takes place 10 to 14 days after the first procedure.

4. Post Procedure Care

As opposed to other hair loss treatments, the care needed for Scalp Micropigmentation right after the procedure is very simple and low maintenance. You only need to wash your head the fourth day after the treatment and, during that time, avoid any strenuous activity that will prompt undesired sweating.

Once the procedure is complete, the results of a Scalp Micropigmentation treatment can last up to five years.

The Color of Nature

Through innovative and rigorous research, the Foundation for Hair Restoration and the Women's Center for Hair Loss have developed the best possible medical grade pigment, which abides by the highest industry standards. More importantly, this proprietary pigment is made up of natural ingredients, with no metals, which can cause color change over time.

Do you qualify for SMP?

Scalp Micropigmentation (SMP)

*Quick and Effective Treatment for
Hair Loss, Performed by a Specialist*

Heading on the Right Path

Whether you're affected by thinning hair, pattern baldness, or scarring of the scalp, Scalp Micropigmentation is an immediate, affordable, and effective hair loss solution.

SMP is an excellent option for those patients who either don't want or are not eligible for hair transplantation surgery, or as a complementary procedure for those who want the appearance of thicker, fuller hair.

What is Scalp Micropigmentation?

Scalp Micropigmentation (SMP) is a simple and minimally invasive procedure that creates the appearance of a full head of hair by carefully and meticulously placing tiny pigment impressions amongst existing hair. Each impression replicates natural hair follicles, creating a realistic look that is surprisingly low maintenance.

When delivered by one of our experts, SMP can give the appearance of naturally restored receding hairlines, thicken remaining hair, camouflage existing hair transplant scars, and/or create the look of close-cropped hair.

Scalp Micropigmentation is a non-invasive procedure, suitable for men and women. Unlike other hair loss treatments, it gives you immediate results with no downtime, and is less expensive than a hair transplant.

— Our SMP Team —

Elsa Rivero
ARNP (Miami)

An Advanced Registered Nurse Practitioner and a highly accomplished SMP expert. With over 10 years of experience in hair restoration working alongside Dr. Epstein, Elsa's main goal is to safely achieve the best aesthetic results with the best care.

Jose Armas
Hair Technician
(Miami and NYC)

A highly skilled hair restoration technician with over seven years of experience and one of Dr. Epstein's top assistants. He has used his hair transplant knowledge to fine-tune and improve his SMP techniques. Trained by world renowned SMP artists from Europe and New York, he combines the best techniques from each.

Dr. Gary Linkov
MD (NYC)

A board certified, fellowship-trained facial plastic surgeon working full time in the NYC office as Dr. Epstein's associate. His areas of expertise are the treatment of male and female hair loss including scalp micropigmentation to achieve the most aesthetic results.

What They Say About SMP

"I've been a patient of Dr. Epstein's for quite some time now. While I was looking into SMP, I found out that one of Dr. Epstein's nurses was one of the experts performing this treatment. Since my transplant results came out great, I decided to have the SMP here, and my results came out great, under Dr. Epstein's guidance. I live in Connecticut where there are a lot of SMP centers, which I'm sure are great, but with my experience with Dr. Epstein and his staff, this was an easy decision and I couldn't be happier."

- Ali, Patient

"Now that I've had my micropigmentation done, I don't have to worry about any of my old donor site scars from work done in the 1980s, showing. Thanks so much doc!"

- Hank, Patient

"SMP made the difference between looking good and now looking really good. Your hair transplants were really effective Dr. E, and by having my scalp made a bit darker, I feel so much prettier and not so thinning with my hair."

- Cecilia, Patient
